

CO-FHC HYDRA CABLE ASSEMBLIES

The **CO-FHC Hydra Cable Assemblies** use cable with a LSZH sheath containing from 2 to 32 primary or secondary coated fibres which has been designed to take up less volume within the ODF or Exchange than the equivalent number of patchcords.

The proprietary designed Hydra Breakout Head allows the fibres to be separated into individual $\text{\O}2.0\text{mm}$ or $\text{\O}2.4\text{mm}$ LSZH ruggedised reprotction.

Hydra Cable Assemblies can be terminated at one or both ends and are typically used for splicing either to optical equipment or to external/internal multi fibre cable or for patching between ODFs and optical equipment or between optical equipment racks.

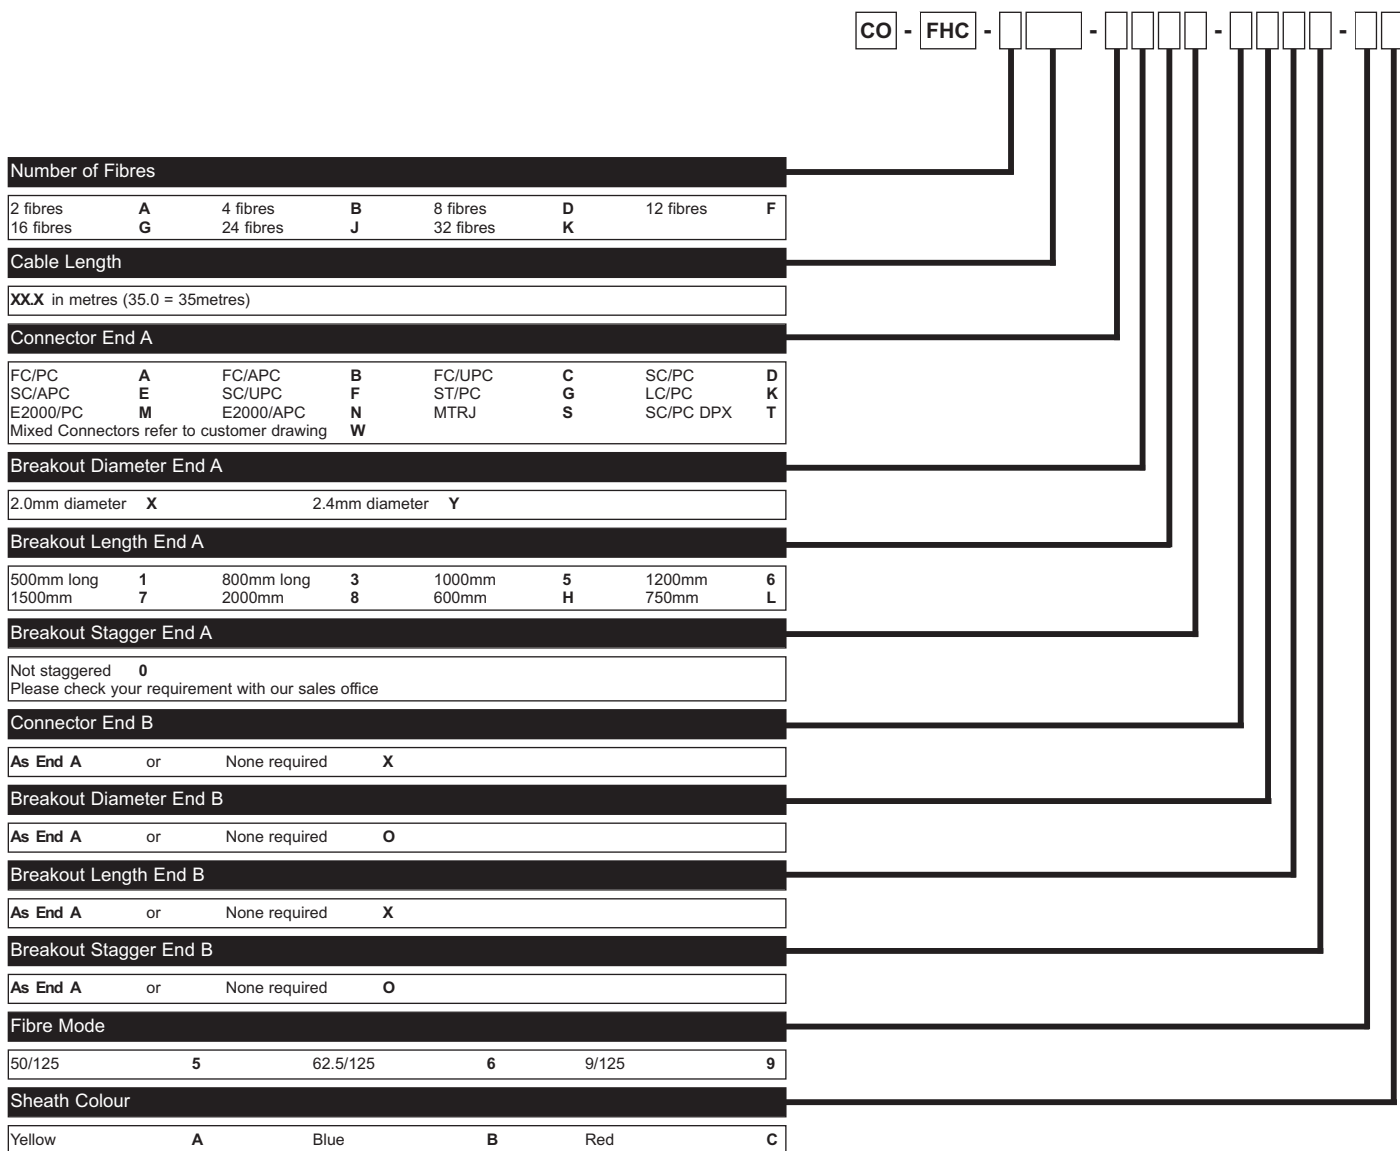

The unit has the following features

- Breakout lengths of the individual fibre tails can be specified and can be terminated all at the same length or staggered to tailor the installation.
- All terminations are manufactured to stringent standards and are subjected to a 100% visual inspection and optical test.
- Test results and interferometer readings can be supplied with each assembly on request.
