

Optical Fibre Distribution Module

Comacc offers a range of Optical Fibre Distribution Modules. These make use of the fibre management drawer which has a maximum fibre capacity of 32 fibres depending on the choice of connectors.

Modules are fitted to recessed 19" or ETSI rails to allow the maximum room at the front of the cabinet for access and fibre management.

The ODFM is designed to take Comacc's pivoting fibre management drawer which offers ease of access to reduce installation and maintenance time. Splicing can be achieved without removing the unit from the cabinet and patching of the fibres only requires a limited movement of the drawer. The connector of choice can be fitted and drawers are supplied preloaded with fibre pigtailed where required. Optical Fibre Distribution Modules are available in the following sizes (see table below).

Comacc also have a range of rear mounting modules for TEP-1E cabinets. Based on the 24 fibre splice drawer, they are available in the following sizes:-

2VU – 24 Fibres	4VU - 48F
7VU – 96 Fibres	10VU - 144Fibres
11VU – 168 Fibres	14 VU – 216 Fibres
16 VU – 240 Fibres	19 VU – 288 Fibres

The fibre management drawer can be supplied individually for retro-fitment onto existing backplates. Cable Unit Breakouts (CUB) and slack fibre shelves are also available.

For 19" fitting where cabinet profiles are mid-cabinet mounted. All backplates and patchcord managers are fabricated from mild steel (Zintec) and powder coated in light grey for a durable finish. Each unit is supplied with installation recommendations.
